

SUGAR, SLAVERY AND EMANCIPATION: THE INDUSTRIAL
ARCHAEOLOGY OF THE
WEST INDIAN ISLAND OF TOBAGO

BY

THOMAS HALES EUBANKS

A DISSERTATION PRESENTED TO THE GRADUATE SCHOOL
OF THE UNIVERSITY OF FLORIDA IN PARTIAL FULFILLMENT
OF THE REQUIREMENTS FOR THE DEGREE OF
DOCTOR OF PHILOSOPHY

UNIVERSITY OF FLORIDA

1992

by

Thomas Hales Eubanks

Dedicated to the the People of Tobago
and the memories of my father Robert W. Eubanks Sr.,
my mother Ann Hales Eubanks,
and my brother Robert W. Eubanks Jr.

ACKNOWLEDGEMENTS

Many persons have made this effort possible. I am indebted to Michael Moseley, supervisor of this effort and central in helping me to develop the research, secure funding and improve my writing skills. He has always been supportive and interested in my research objectives—even introducing me to the beautiful island of Tobago and its wonderful people.

Charles Fairbanks and Charles Wagley contributed prominently to my research orientation. Chuck Fairbanks gave me the skills and encouragement to begin my academic career anew as an historical archaeologist. Chuck Wagley refocused my attention to the people I was studying and not just the remains of their lives. Together, they nurtured the desire to understand and explain the cultural history and archaeology of the Plantation Era and the people who owned and worked on those plantations. They were also my friends.

Allan Burns helped me through all of the pitfalls of graduate studies in the Department. He also encouraged me to appreciate the value of this work and its implications for integration and continued undertakings with researchers in other areas of anthropology.

Terry McCoy and Ralph Johnson were also enthusiastic and encouraging toward the research. Terry McCoy helped me to understand the work I was undertaking in the context of the larger Caribbean region. Ralph Johnson guided me through the architectural intricacies that do not often face archaeologists and the preservation imperative necessary for Latin America and the Caribbean.

Peter Schmidt's contribution has been in two forms. He refocused my interest in identifying Africanisms from the archaeology and contemporary culture. While the

specific nature of my research limited the opportunities to document Africanisms archaeologically, I better understood the people with whom I worked and lived. Peter Schmidt also supported and reinforced my intent to ensure that the people of Tobago's interest in my research be respondent to their wishes, requirements and benefit.

A generous 1989 award by the Amoco Foundation Inc., sponsored by Amoco International Production Company and the Amoco Trinidad Oil Company, provided the vital catalyst for undertaking the research. The Tobago House of Assembly provided direct and indirect support for many phases on the project. Further, support from Village Councils, the University of the West Indies, the International Training Program of the Organization of American States, Pan American World Airlines, and Laughlin and Associates made continuation of the work possible.

In Tobago, my friend and colleague George Stanley Beard has managed the local participation in the project and worked with diligence to ensure its success. A. N. R. Robinson supported the project from its outset and continues to aid the effort. J. D. Elder has also sponsored and encouraged the research.

Lenox Denoon, Chairman of the Tobago House of Assembly, continues his interest in the work. His predecessor, Jeff Davidson, provided needed assistance during the 1989 phase of the research, as did Noris Jordan and Edgar Davidson. Edgar Davidson has also continued his support in 1991 and 1992. Senator Hochoy Charles has worked very hard to continue the project in his capacity in Tobago and Trinidad. The Tobago Cadet Corps provided more than twenty young men and women to assist with the excavations at Mt. St. George. Nicole Gray, James Trim and Ronald Alfred worked many hours of unpaid overtime to insure that the efforts were completed. Eulaly Hills, Louis Vilain and Frank Stanislaus of the Tobago Art League and archaeological support group took their spare time to help locate sites. Milton Catterson and his sons in Mt. St. George helped keep the site clear of the never relenting vines and trees that continued to invade the work areas.

Margaret Hamlet befriended me, kept me very well fed and informed about life in Tobago.

Peter Harris acted as my liaison with the University of the West Indies and the National Archaeological Committee. He scrounged equipment, introduced me to people and enthusiastically supported the research. In Trinidad, he and his wife Marian offered me the best hospitality. Our friendships and working relationships continue in Gainesville, where Peter is beginning a second career as a graduate student in anthropology

Many of my fellow graduate students also must be thanked for their support. Dennis Satterlee, Nina Borremans, Steve Krzyston and Karen Jo Walker provided advice and support. Christopher Clement has provided advise and is continuing work in Tobago. William Johnson not only encouraged the work, but he and Robert Ulshafer spent a vacation helping out in Tobago.

And finally, but certainly not least, I would like to acknowledge and thank E. Michael Whittington—my friend, companion and on rare occasions my field assistant. Without his encouragement, help and faith, this document would not exist.
