

China Grain Industry Association Work Plan for 2022

by Dr Wu Wenbin, Henan University of Technology, China

The year 2022 is set to be a crucial year for comprehensively building a modern socialist country and embarking on a new journey towards the second Centenary Goal. The general thinking of CGIA is as follows.

The programme includes fully implementing the new development concept, actively integrating into and serving the new development pattern, focusing on the central task of 'serving national food security and promoting enterprise innovation and development'.

We have already made breakthroughs in key areas such as grain saving and loss reduction, serving the economic operation and carrying out skills training.

1. Continue to provide better services with a new vision for development

With innovation and development as the driving force, we will provide new services and further promote the quality and brand improvement project. With the goal of coordinated development, the government has set up a platform for production and marketing, which was held the 19th China International Grain and Oil Products and Equipment Technology Exhibition And Fair (International Grain and Oil Expo) and other activities.

With green development as the main line, we will participate in the promotion of high-quality grain projects, increase the supply of green high-quality grain and oil products, and promote the construction of a credit system for the industry.

China will also strengthen its international exchanges and cooperation, hold an international forum on development and investment of modern food supply chain, world high-end rice industry conference and world food trade forum, participate in the construction of the 'One Belt and One Road' strategy and

steadily enhance the status and role of China's grain merchants in the international food market.

2. Multiple measures were taken simultaneously to reduce grain loss

We will thoroughly implement the relevant requirements of the Action Plan for Grain Conservation, and prepare for the establishment of a Working committee for Practicing Strict Economy and Opposing Waste (Grain Saving and Reducing Loss) under the China Grain Industry Association.

To study and formulate effective methods and measures for promoting grain saving and reducing loss. We will study and formulate standards for grain loss reduction throughout the grain industry, and guide member enterprises towards standardising their economising behaviour, whilst also reducing waste through new systems and standards.

3. Focus on the economic operation of the service industry

We will do a good job in Covid-19 prevention and control. Carry out in-depth investigation and research, keep close contact with enterprises, coordinate and solve common problems faced by the industry, give full play to resource advantages, improve the work system of the association, and hold conferences of provincial associations in separate areas.

We will also cooperate with grain enterprises to carry out special research, relying on the international Modern Grain supply chain Alliance, to promote upstream and downstream grain enterprises, import and export, port logistics enterprises to jointly deal with risks and challenges, along with coordinated development.

4. Actively promote vocational skills training

In accordance with industrial distribution and development

needs, and relying on institutions of higher learning, vocational schools and large backbone enterprises, we will gradually establish training bases for skilled personnel.

We will also continuously select branches of social training and evaluation organisations in the grain industry, and initially form a network of skilled personnel training institutions.

This will be achieved by revising standards, teaching materials, question banks and programs, and carry out vocational skills training and grade recognition in the grain industry. We will vigorously promote the spirit of model workers, labour and craftsmanship.

5. Fully support the development of small & medium-sized enterprises

In addition to the previously mentioned actions, we will also explore ways of establishing a platform for the supply and demand of industrial chains, strengthen the supply and supply of raw grains, promote market order stability, and ease the pressure of rising costs for enterprises.

Actively promote bank-enterprise cooperation and strive for credit loan support policies. We will support small and medium-sized enterprises in transforming and upgrading, improving their operation and management, enhancing their core competitiveness, and pursuing the path of specialised, and innovative development.

6. Innovation, reform and development

We will all adhere to innovation, and work together to make new breakthroughs. While doing routine work well and holding large-scale activities well, new connotation should be given to the work, and new service fields and service projects should be actively expanded in order to sustain high-quality development of

the economic operation of the grain industry.

Reform and transformation should also be carried out to improve service capacity and level. Through building network information service platform, strengthen policy interpretation, standard publicity and typical enterprise case publicity.

Strengthen industry management and technical advisory services, organise experts to carry out appraisal work for enterprises' scientific and technological achievements and projects.

Do a good job for members, explore the establishment of member service hotline, whilst also promoting international exchanges and cooperation. This will be achieved by actively participating in relevant activities of international organisations, promoting international exchanges and cooperation, in line with the "one Belt and one Road" strategy.

Further measures will include timely organising and participating in foreign exhibitions and conferences, keeping close contact with foreign enterprises, associations and other relevant organisations, as well as organising international exhibitors and international visitors in large-scale events such as grain and oil exhibitions.
